## Preparation

- Install the [Anaconda Python Data Science Suite](#)
- Download the [zip file](#) with the workshop code

## Code Snippets to Handle the Conda Environment

I extended the list of software packages to be installed to run all provided workshop examples. Mac and Linux users just open a standard terminal. On Windows open the Anaconda Powershell prompt.

Execute the following code:

```
# create conda environment
conda create -c conda-forge -n unicaes jupyterlab ipywidgets numpy pandas
scipy scikit-learn matplotlib plotly seaborn
```

```
# activate conda environment
conda activate unicaes

# start Jupyter-Lab (<Ctrl>-C in the terminal to exit jupyter-lab)
jupyter-lab

# remove environment (in case you want to delete it)
# conda env remove -n unicaes
```

## Video Recordings (unfortunately with very bad sound quality)

- Part 1: <https://youtu.be/3x-HB5OIHwg>
- Part 2: <https://youtu.be/eLAWMHvp8EE>
