Fig.: Great audience! 😊

## Preparation

- Install the [Anaconda Python Data Science Suite](#)
- Download [unicaes\\_ws\\_v002.zip](#) containing the workshop Python code

## Code Snippets to Handle the Conda Environment

This code is to be executed in a terminal. I extended the list of software packages to be installed to run all provided workshop examples. Mac and Linux users just open a standard terminal. On Windows open the Anaconda Powershell prompt.

Execute the following code:

```
# create conda environment including installation of all necessary packages
conda create -c conda-forge -n unicaes jupyterlab ipywidgets numpy pandas
scipy scikit-learn matplotlib plotly seaborn

# activate conda environment
conda activate unicaes

# start Jupyter-Lab (<Ctrl>-C in the terminal to exit jupyter-lab)
jupyter-lab

# leave conda environment and change to the base (default) environment
conda deactivate

# remove environment (in case you want to delete it)
# conda env remove -n unicaes
```

## Video Recordings (unfortunately with very bad sound quality)

- Part 1: <https://youtu.be/3x-HB50IHwg>
- Part 2: <https://youtu.be/eLAWMHvp8EE>

## Additional Information

- [Python tutorial](#) from [CS231n: Deep Learning for Computer Vision](#) Course at Stanford
- [CS231n Github Repo](#)
