

Notes on buying a new machine

Recommended:

- Ryzen 7 / i7 (16 Threads+)
- 32GB RAM
- GTX 1070

Interesting discussion:

https://www.reddit.com/r/photogrammetry/comments/lcywo8/computer_build_for_rendering_of/

- Limited improvement with more cores, but multitasking
- fast storage + storage for old projects
- 128GB enough for 5k images
- RTX3070

Meshroom can multi-thread on some nodes but not on all. So more cores != faster!

<https://github.com/alicevision/meshroom/issues/175>

Multiple GPUs can be used if they are older to make Meshroom run faster. Although on newer GPUs there isn't much of a difference. <https://github.com/alicevision/meshroom/issues/644>

In this post, it is also mentioned that it is important to have one fast SSD. GPU is not that important because it is only used while depth mapping. I personally can confirm that. A GTX 1070 ti can go through this process kinda fast. An RTX 3080 would do the job just fine.

Just some performance graphs and recommendations for another similar program:

<https://www.pugetsystems.com/recommended/Recommended-Systems-for-RealityCapture-228/Hardware-Recommendations>

As I expected for multiuser remote desktop on Ubuntu xrdp is an option:

<https://askubuntu.com/questions/1292694/multi-user-remote-desktop-from-windows-to-linux-machine>

But still, X11 would also work. I have experience with xrdp already and it works well enough for most tasks.
